

The Energy **Saving** Solar Economizer

Available in  **Homes**

- A **GREEN** Whole House Ventilation System.
- The Economizer provides continuous ventilation to further enhance a healthy and comfortable indoor environment.
- Operating on solar power and wind power, the Economizer saves homeowners on their electric and oil consumption.
- **The Economizer saves the homeowner 100%** on the operating cost for ventilation compared to other whole house POS ventilation systems.
- **Homeowners save on Energy in the Summer** by removing radiant heat. This allows the air conditioner to be more effective.
- **Homeowners save on Energy in the Winter** by removing condensation from the house. A dry house is a warm house.

Enjoy your fan, which is located on your roof (*not the ceiling*).
This design provides quiet operation.

*Picture of vent in diagram is disproportionately large to show detail

The Solar Economizer is eligible for LEEDs points, and is presently installed in Energy Star homes throughout the Southern Regions of the US and Alaska. Made in the US, the Solar Economizer is manufactured in compliance with the industry's highest standards.
