

# The Aura Type-B Gas Vent Cap

*Wind-Assisted Exhaust for increasing up-draft performance for efficient furnace chimney venting and providing a weather-shield*

■ **Exhausts Continuously With No Moving Parts**

Outside air moving against the Aura Gas Vent Cap will produce a continuous draw helping the smoke and gases rise to the top of the chimney

■ **Durable and Maintenance Free**

Manufactured from aluminum the Aura Gas Vent Cap is tested to withstand wind speeds of 110 MPH

■ **Improves Safety**

As embers rise up they continue to cool. When they reach the Aura Gas Vent Cap, they bounce against the louvers and then drop into the spark tray, not onto the roof.

■ **Extends Life of Furnace**

The Aura Gas Vent Cap improves the exhaust or updraft from the furnace so excess heat does not accumulate inside the furnace and shorten its useful life.

■ **Can Be Mounted Directly Onto a Pipe**

The Aura Gas Vent Cap is available in sizes from 4" up to 72" in diameter.

Do not use Type B Vent for Category II, III or IV gas appliances. Always refer to gas appliance manual and all local and national codes!
