

The Energy **\$**aving Economizer

A Whole House Ventilation System available in all Northwest *Marlette* Homes for a healthy indoor environment.

- *Marlette* is the only builder in the Northwest that tests all of their whole house fans and bathroom fans for air movement.
- Tested fans ensure that a home is properly ventilated.
- *Marlette*'s Economizer ventilation system is the only whole house system to give moisture and air pollutants an engineered path directly to the outside.

Enjoy your fan, which is located on your roof (not the ceiling) for quiet operation.

*Picture of vent in diagram is disproportionately large to show detail. Cutaway view shows propeller.

Research has shown over the years that ventilating during the summer in order to remove radiant heat and during the winter to remove excess moisture from walls and insulation will save homeowners on their energy consumption year round.
